

House Management System!

Problems !

- House rental is a time consuming process .
- Finding right renters/House holder is also a challenge .
- Some renters/House Holder may have a positive relationship others may not.
- There are different renters/house holder who have different behavior that show different characteristics on people.

S o l u t i o n !

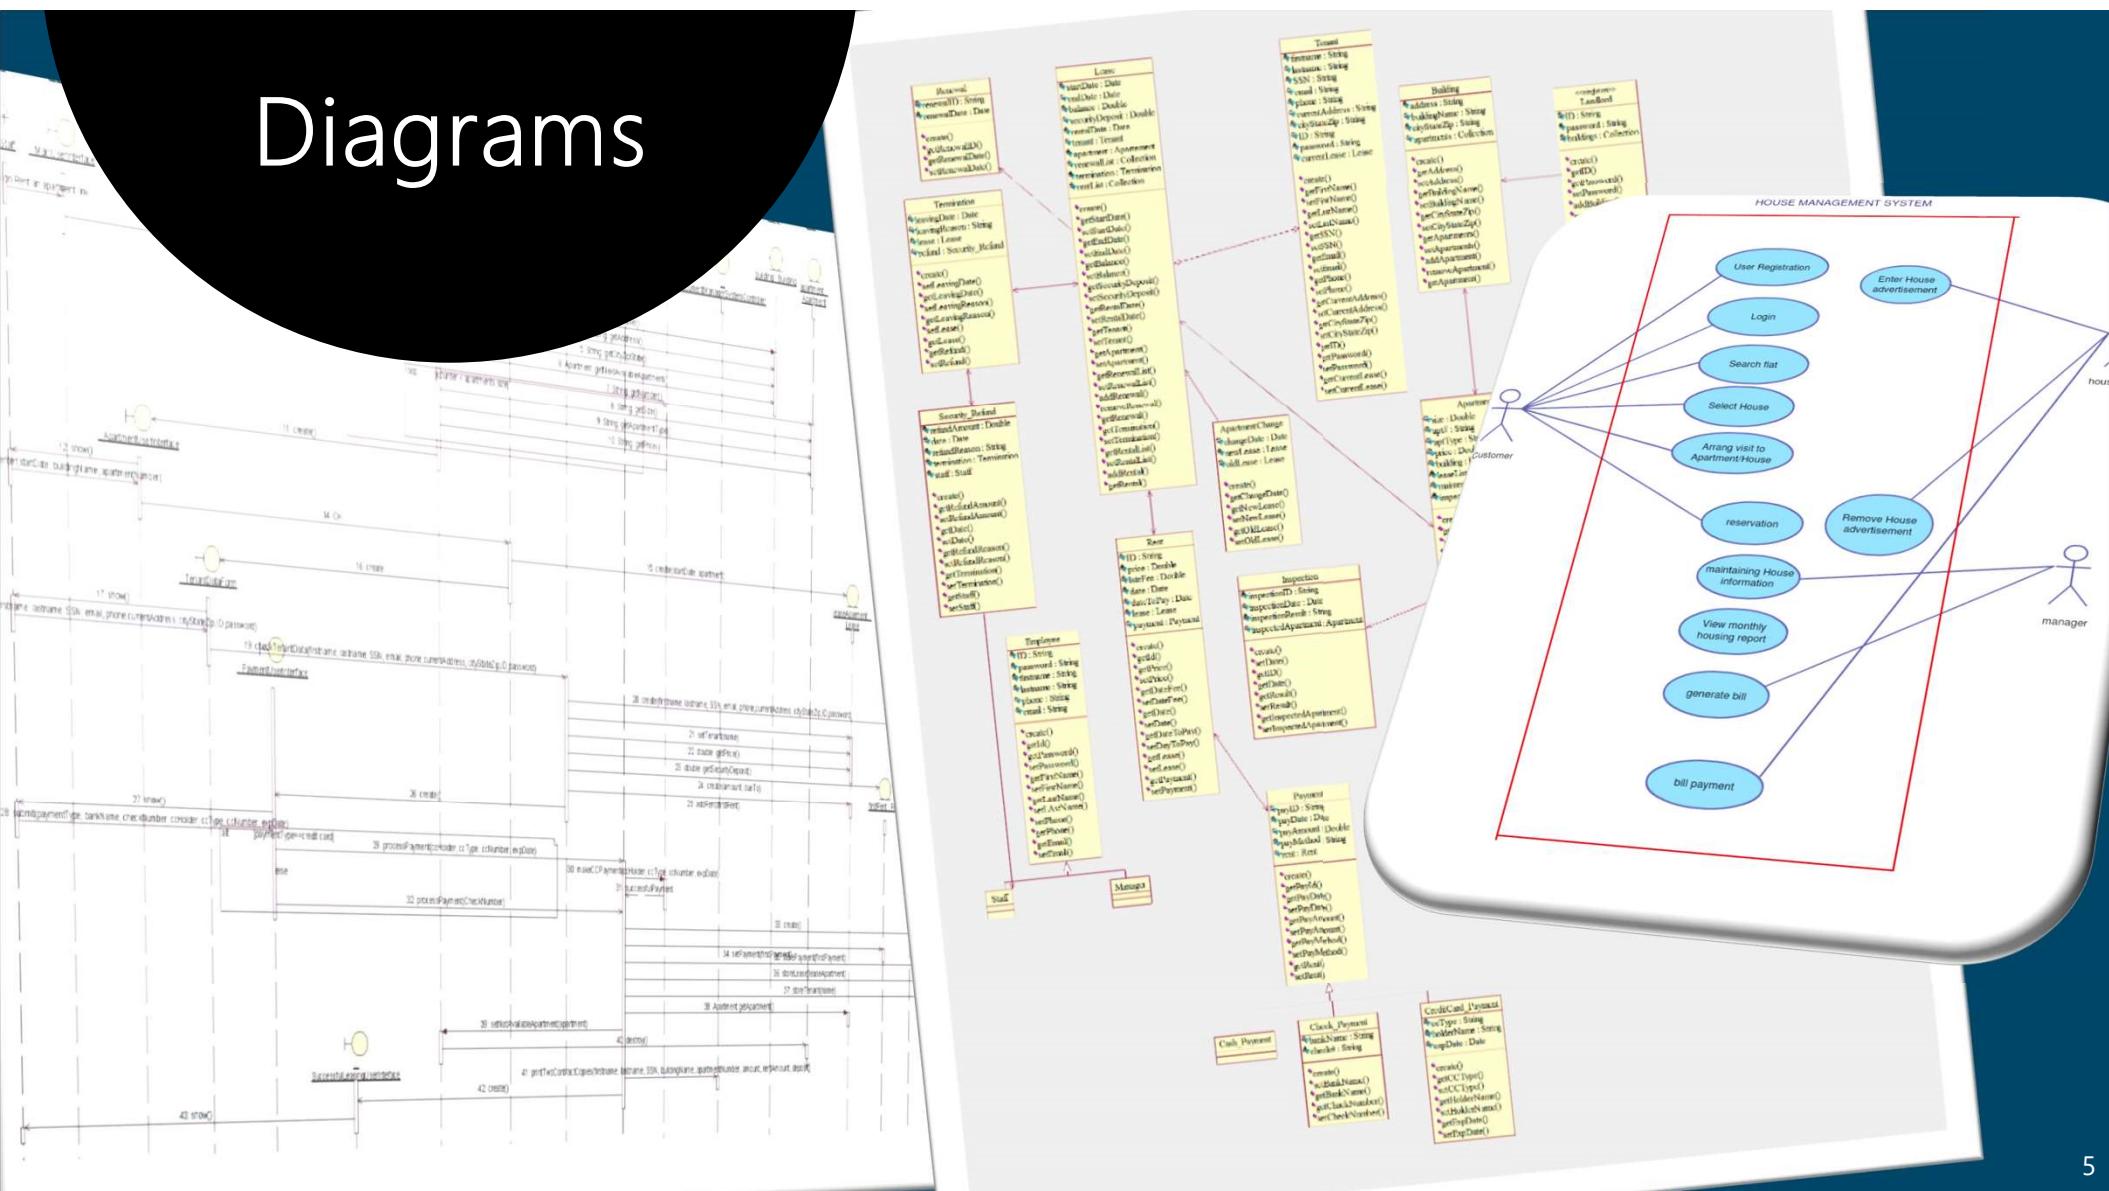

- This system will save both our time & money.
- We don't' have go outside and look for house here and there..
- We can find them on our device from anywhere.
- Also we can make sure that we have found right Tenant/House holder by checking there detail info.

It will be easy like snapping your finger!

System progress !

- We needs to research a lot to build the system.
- We made a report where you can see the details of this project.
- You can find Class Diagram, Sequence Diagram, Activity Diagram , Requirements, Feasibility, Methodology, Fact & Techniques and many more things on the report.
